

# RESCO Protection Block

**RESCO**  
CONSULTING GMBH

**Our goal** is to protect people from various dangers.

This is why we have developed the RESCO System Block in many years of research.

Due to the further development of our RESCO System Blocks, the RESCO Protection Block achieves an enormous protection performance, even under fire.

The RESCO Protection Block offers fast solutions, which are easy to handle but still provide safe protection.

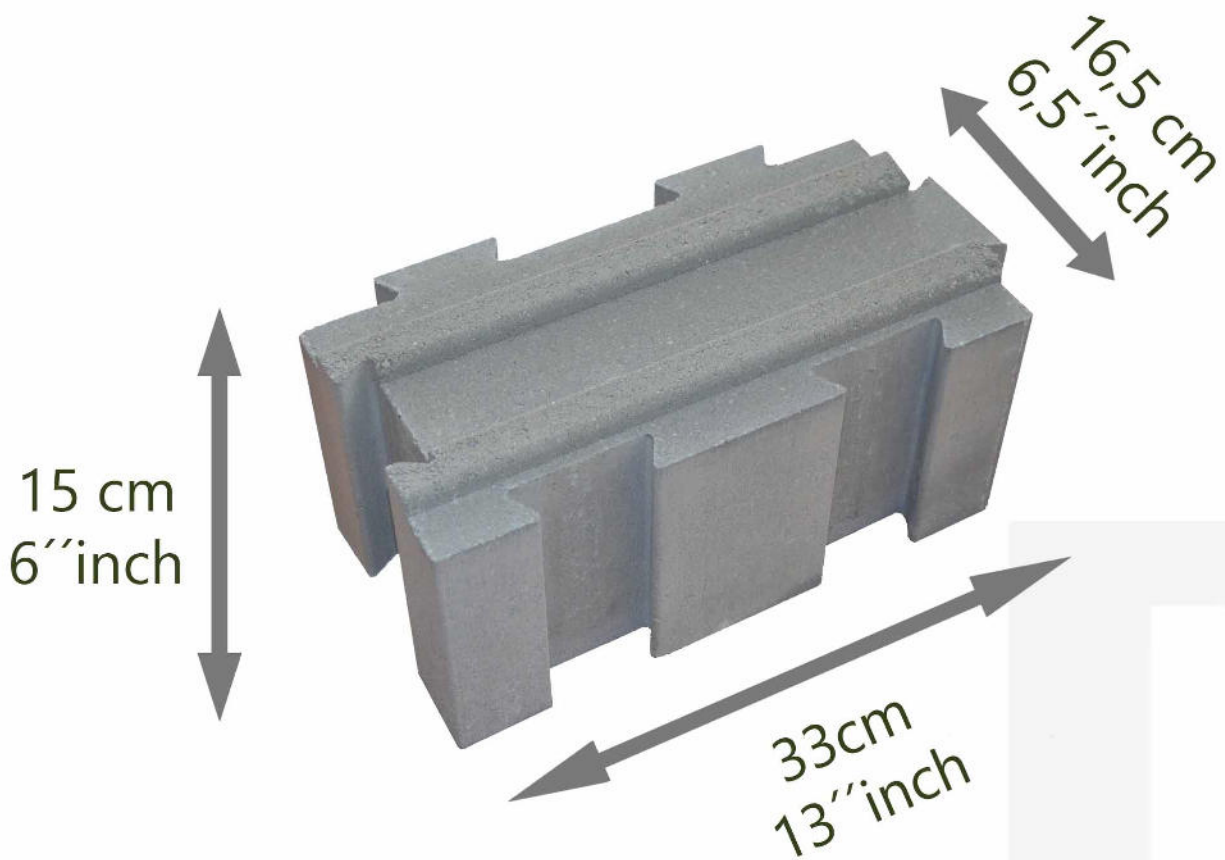

# Size & Measures:

Material: Concrete

Weight: about 40 lbs

1 Euro palett = 60 Blocks

1 Lorry = 1.200 Blocks

# Application:

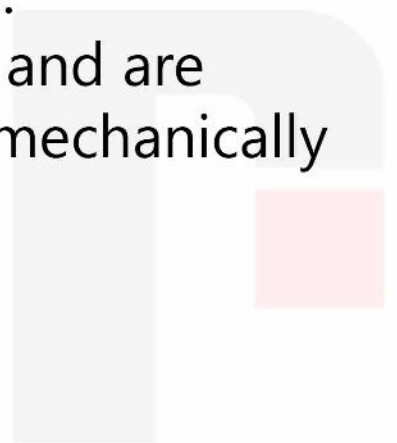

The RESCO Protection Block is easily build up block by block to a protection wall.

This wall can be extended easily and fast into every direction, even at right angles.

Together, the 18-kg blocks form one solid, stable wall.

- No foundation or tool is needed for the construction. The Protection Blocks are simply placed on a load-bearing, level surface.
- The system can also be used without binders. Due to the patented form, the blocks connect ideally to each other and are compatible on each side.
- RESCO Protection Blocks can be stored inside as well as outside and are reusable. After use they can be stored again and are available for the next use ( except mechanically damaged blocks).

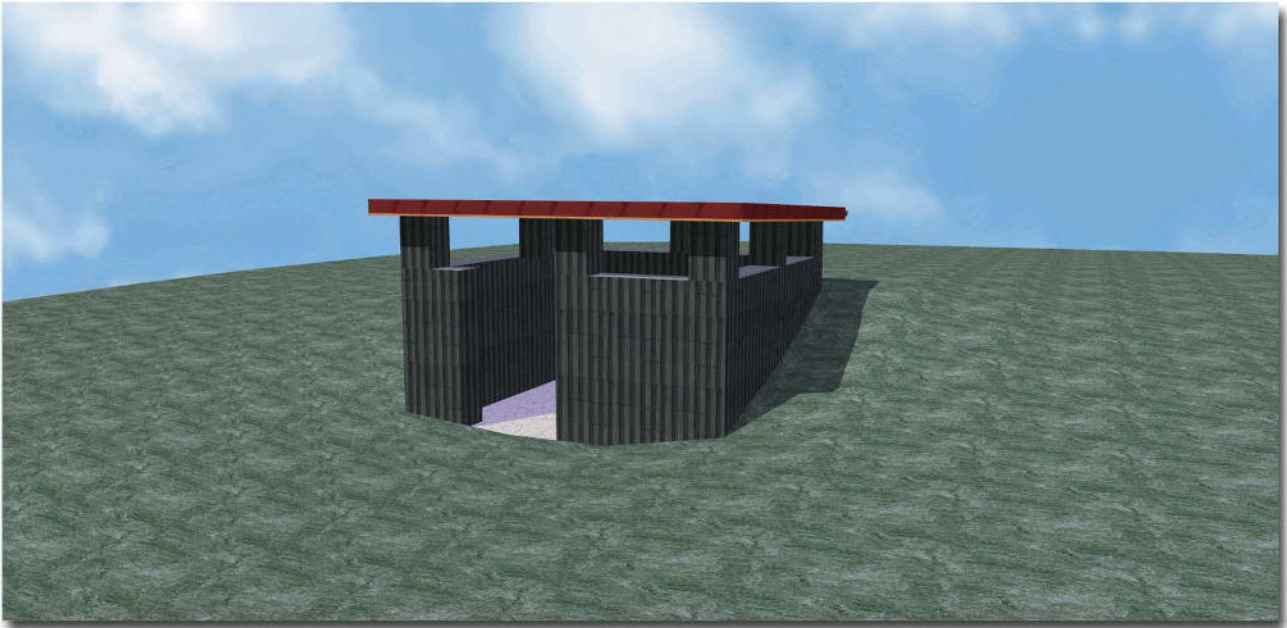

# Fields of Application:

Soldiers also have to be protected outside of the barracks. RESCO Protection Blocks are ideal to build different facilities for the protection of troops:

- Check Points
- Observation Points
- Camp Walls & Accommodation
- Roadblocks etc.

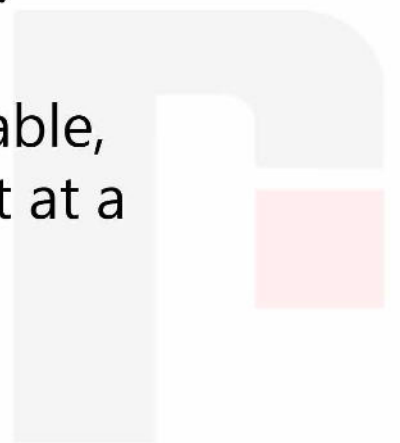

Also all military equipment can be quickly and easily brought into safety and be protected against fire.

# Check Points

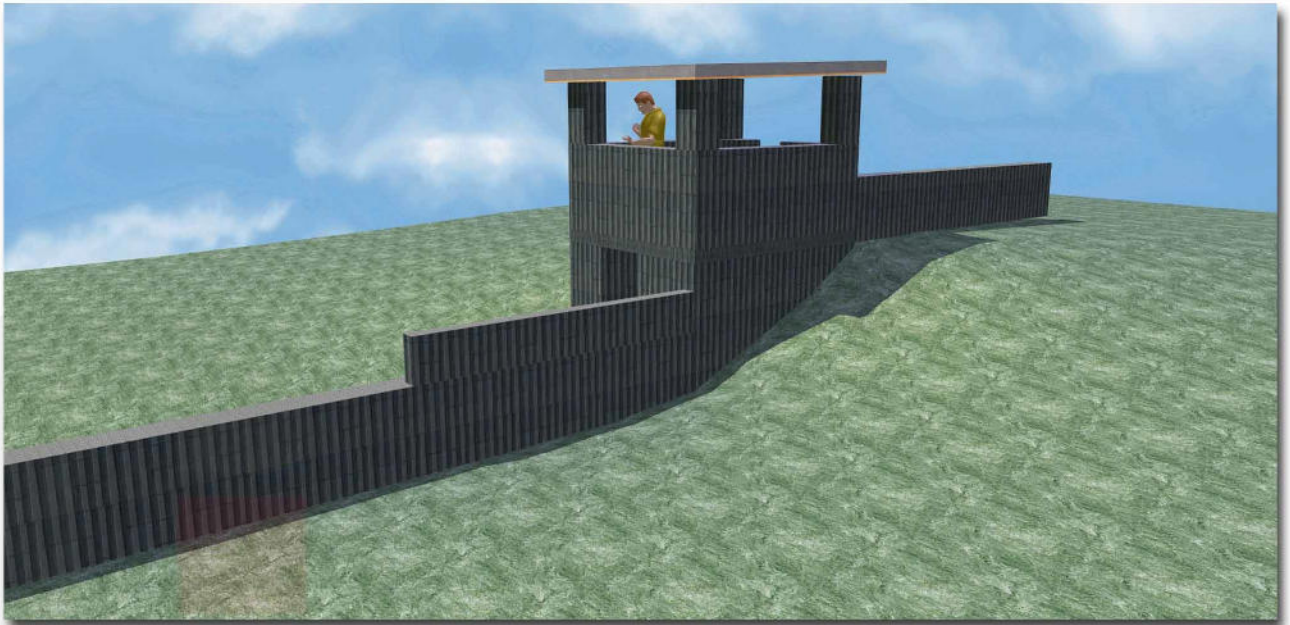

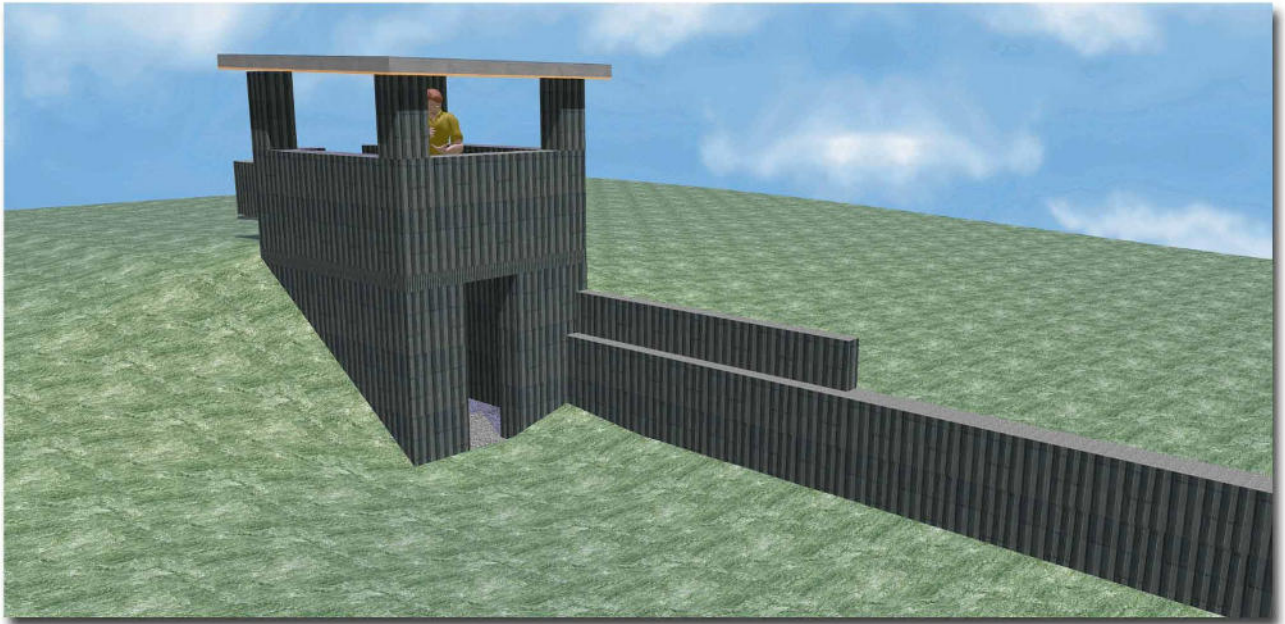

With RESCO Protection Blocks, check points and roadblocks can be set up quickly and easily. The size can be adjusted as required.

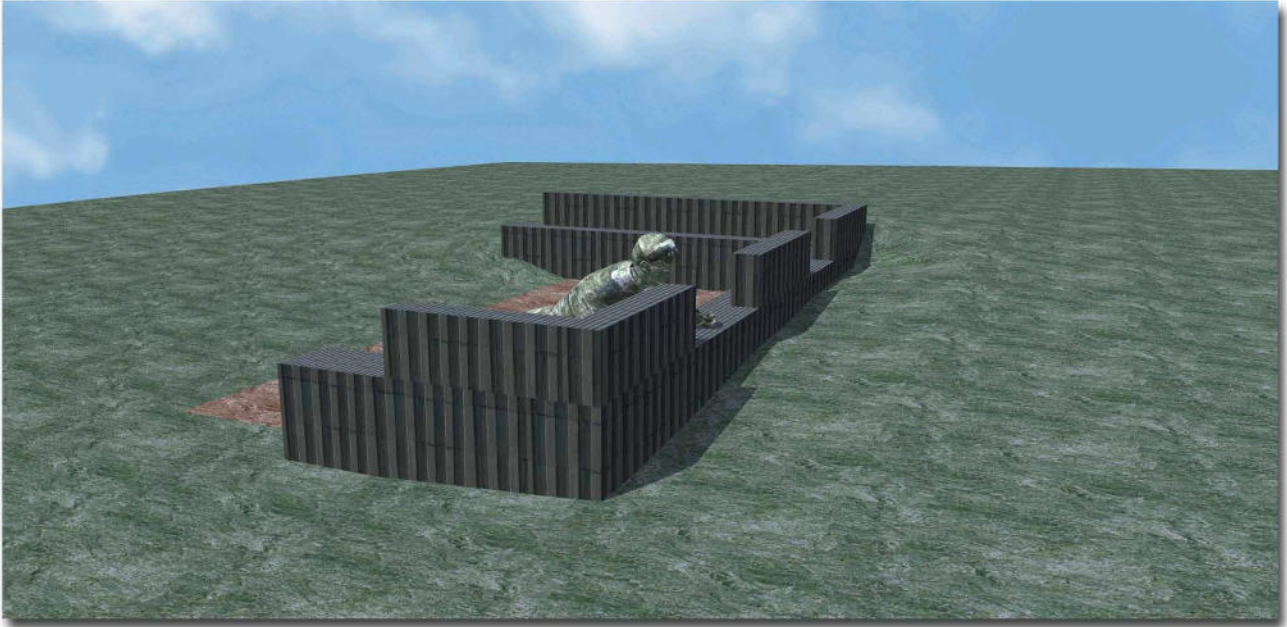

Since our Protection Blocks are reusable, the check points can easily be rebuilt at a different location.

# Observation Points

Even temporary observation points can be set up with RESCO Protection Blocks. Since no binders are required for the construction, the observation point can also be easily removed.

In addition, the soldiers and the equipment benefit from the high safety against gunfire.

# Fixed Accommodations

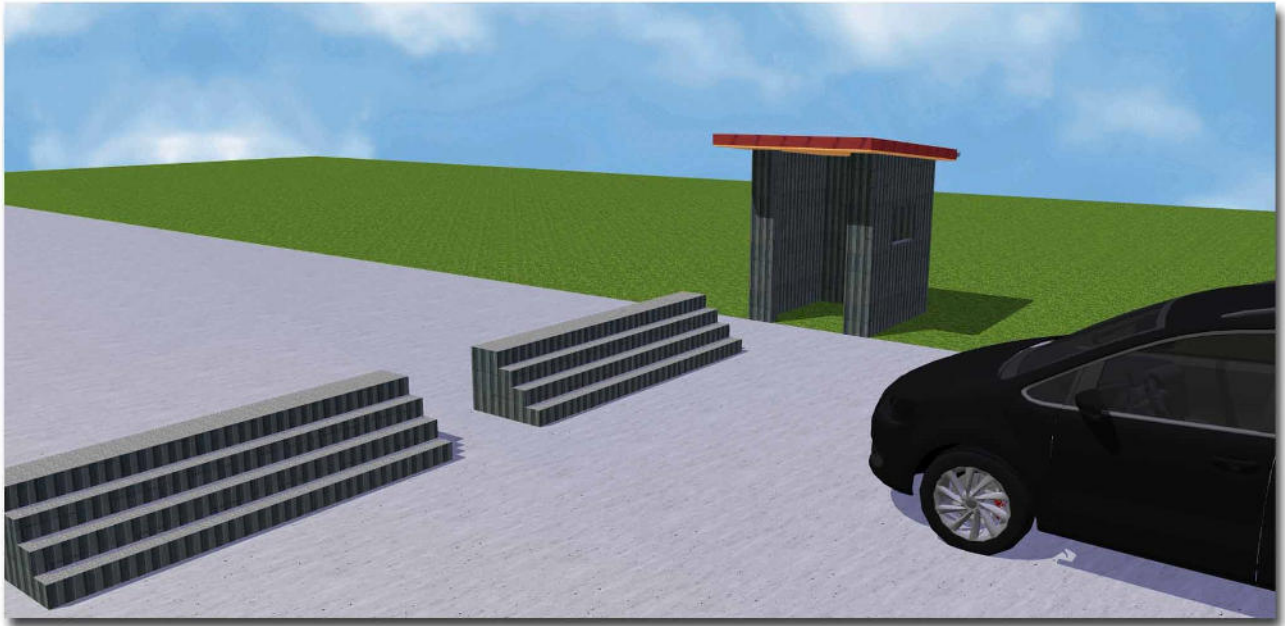

RESCO System Blocks can quickly and easily be used to build fixed accommodations. If required, several accommodations can be connected to accommodate more people. No foundation is necessary, just a flat, stable surface.

The accommodation is much more stable than tents, much easier to store than containers and bullet-proof to a certain extent. In addition, these fixed accommodations can also be transported in rough terrain by manpower without heavy equipment.

After use, the accommodations are dismantled and the blocks are stored for the next use.

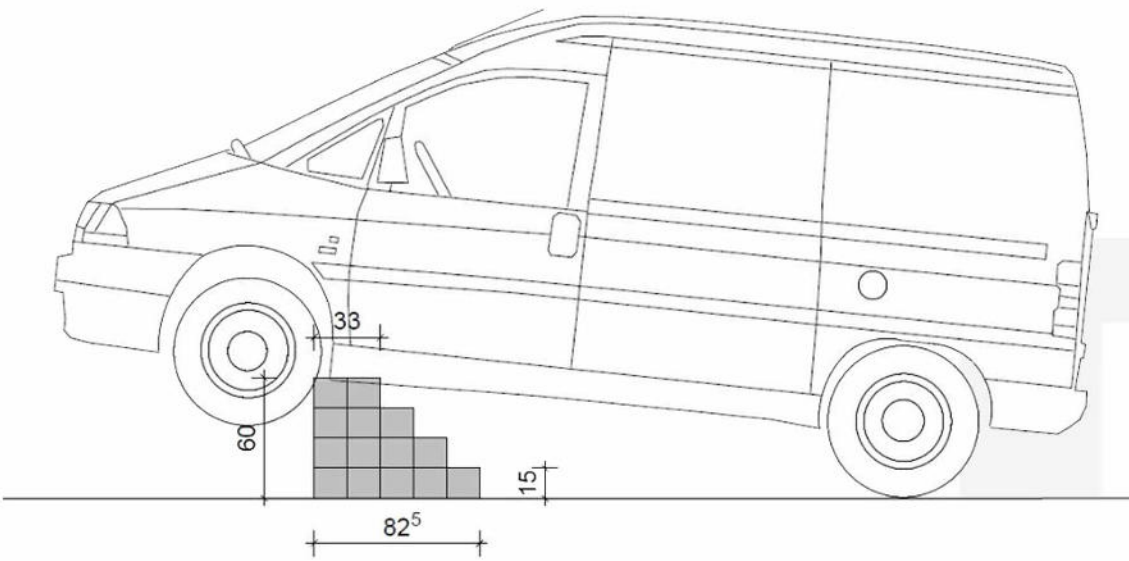

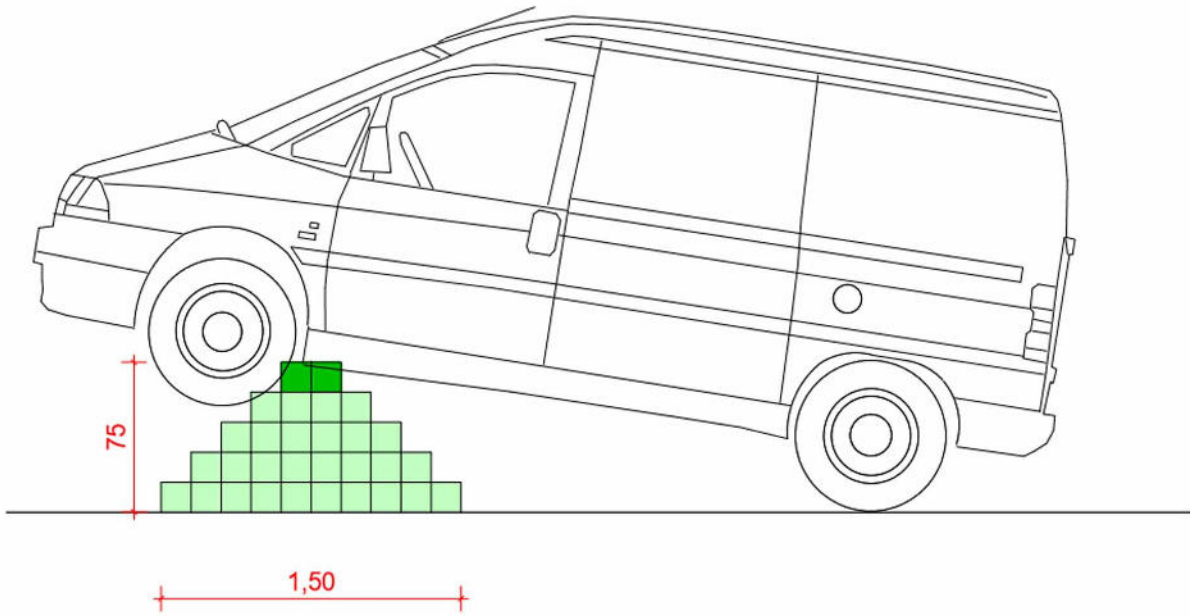

# Mobile Roadblocks

Due to the special shape of our RESCO Protection Block, the individual blocks connect to a heavy-weight wall, which easily blocks cars and larger vehicles.

The height and width of the road block can be easily varied. It also protects against splinters, as well as throwing bullets and is additionally fire-resistant.
